Collection Highlights	10

HONORING OUR PAST. DESIGNING THE FUTURE.

The ORTOVOX story began with the development of the first dual-frequency avalanche transceiver: the F2. Introduced in 1980, it revolutionized the search for avalanche victims and laid the foundation for everything that followed. Today, we are an international full-range supplier of mountain sports equipment – yet our commitment as a safety pioneer remains the same: **to protect people in the mountains as best we can.**

This is what drives us to push the development of new products and technologies every season. Winter 2026/27 is defined by the next generation of avalanche transceivers. With the FOCUS VOICE and the FOCUS PRO, we are setting a new benchmark in the field of avalanche rescue and safety.

The FOCUS PRO in particular was uncompromisingly engineered for the highest demands and the protection of professional users: maximum performance with an 80 m search strip width, innovative professional features, as well as patented voice navigation and safety technologies – all combined in a single device designed for the most challenging use in the alpine terrain.

In this process, close exchange with our partners has always been, and remains, essential: with opinion leaders and training teams, mountain schools and associations. A particularly close partnership has connected us with the Austrian Mountain Rescue Service (ÖBRD) since 2013.

It is out of this commitment that the MOUNTAIN RESCUE COLLECTION was born two years ago: a dedicated collection tailored without compromise to the specific requirements of mountain rescue. Developed for maximum robustness and reliability, with high functionality, versatile usability, as well as specific features and optimal visibility in alpine terrain.

Equipping those who are out every day to keep others safe is something we care deeply about. The fact that we can experience mountain sports in this form is thanks above all to the voluntary commitment of mountain rescuers – around the clock, 365 days a year, in any weather, and under the most extreme conditions.

We hope that the MOUNTAIN RESCUE COLLECTION can make a contribution to protecting those who ensure our protection in the mountains every single day.

Yours,
Stefan Kohlbauer
CEO ORTOVOX

ORTOVOX SAFETY ACADEMY

One of the world's largest training initiatives

The ORTOVOX SAFETY ACADEMY pursues one clear goal: making alpine knowledge more accessible and thus making mountain sports safer. Since 2008, we have been training the alpine community with a holistic safety concept – from digital learning platforms and practical tools to more than 1,200 courses with our partner mountain schools. As a result, the ORTOVOX SAFETY ACADEMY is today one of the world's largest training initiatives in mountain sports.

OUR DRIVE

Protecting mountaineers

Protecting people in the mountains is the core of our actions. This mission drives us to develop products and technologies that offer mountaineers and professionals more safety in demanding alpine situations. We achieve this by combining decades of experience with a close, ongoing exchange with mountain guides, associations, and rescue organizations.

MILESTONES & INNOVATIONS

Leading in the field of alpine safety equipment

We are ambitious. We challenge the status quo, develop new solutions, and refine every detail. For decades, we have shaped the development of alpine emergency and safety equipment – from the revolution of avalanche transceivers to the most advanced airbag systems. Today, we offer one of the highest-quality emergency equipment setups on the market: with high-performance avalanche transceivers, highly functional avalanche probes and shovels, as well as our multi-award-winning electronic avalanche backpack system AVABAG LITRIC.

P R O V E N
B Y

Thousands of alpine professionals worldwide trust the MOUNTAIN RESCUE COLLECTION – even under the most extreme conditions. We are proud of our close partnerships with mountain rescue organizations across the globe.

P R O F E S S I O N A L S

Giving the
best to protect
those who
protect us

The MOUNTAIN RESCUE COLLECTION is the spearhead of our product development. It is specifically tailored to the needs of professional rescue teams – for adverse conditions, round-the-clock operations, extreme wear and tear, and specific requirements.

What began in 2013 with a close cooperation with the Austrian Mountain Rescue Service has evolved over the years into an international network. Today, alongside the ÖBRD, numerous mountain rescue organizations across Europe and beyond trust products from the MOUNTAIN RESCUE COLLECTION. This close exchange with users provides invaluable insights for the continuous development of the collection. And many of the innovations later find their way into our regular products.

We are proud to equip those who take responsibility for the safety of others in the mountains every single day with our MOUNTAIN RESCUE COLLECTION.

"It is a significant effort for a comparatively small user group. Yet for us, the collection is an important commitment. We want to provide mountain rescuers worldwide with equipment they can rely on in any situation."

Viola Goldhofer
Developer of the Mountain Rescue Collection & state-certified mountain and ski guide

INTERVIEW

MAX

Max, the MOUNTAIN RESCUE COLLECTION has now been in use for two years. How has it been received and how has it evolved?

The response has exceeded our expectations. From the very beginning, our goal was to develop an uncompromising collection for professional rescue teams that would stand up to the rigors of everyday rescue work. The fact that the products have now been successfully in use for two years confirms this approach. We are particularly happy with the positive feedback from the organizations: The collection has proven itself across a wide range of rescue scenarios and has earned an excellent reputation among the

mountain rescue community. We have also won several major tenders. Within just two years, we have established ourselves as an international player in the field of mountain rescue clothing. This is a great success and, for us, the best validation that functionality, quality, and practicality are convincing.

Is there a product that has sold particularly well?

The success of the collection cannot be reduced to a single product. A core concept behind the MOUNTAIN RESCUE COLLECTION is its modularity. Organizations can choose exactly the products they need – from individual pants to full outfitting. As a result, smaller quantities and budgets can also be implemented without any problems. At the same time, the products are directly available, which is a decisive advantage for many organizations. It is precisely this flexibility that makes the collection so attractive to many partners.

How has the collaboration with partners changed in recent years?

Our close partnership with the Austrian Mountain Rescue Service (ÖBRD) goes back many years. With the MOUNTAIN RESCUE COLLECTION, however, we also wanted to make professional equipment accessible to a wider range of organizations. Thanks to the modular ordering options, we have been able to win numerous new partners over the past two years – from regional mountain rescue groups to international rescue units. What is particularly exciting is that we find a solution for every requirement: from custom-designed T-shirts for Alpine Rescue Switzerland to special Rescue Operator backpacks for the CNSAS Veneto, all the way to personalized 3L jackets for the Slovenian GRZS. This close exchange continuously improves the collection and has significantly expanded our network in international mountain rescue.

As **Professional Relations Manager** at ORTOVOX, Max oversees sales partnerships for the MOUNTAIN RESCUE COLLECTION across the **full spectrum of alpine professionals**. A **state-certified mountain and ski guide**, he has been involved in the development of the collection from the very beginning and maintains a close exchange with rescue organizations and professional users.

What new developments are planned for the coming years?

Our aspiration is to continue developing the collection and align it even better with the needs of professional emergency teams. One important step is the introduction of the FOCUS PRO – an absolutely competitive avalanche transceiver with pro features for specific search strategies in avalanche rescue. We are also working on a new insulation jacket featuring innovative materials like DownWool® for even greater warmth at a low weight.

What has been your personal highlight since the collection has been on the market?

What excites me most is how the collection sometimes seems to spread almost by itself. Since I cannot visit every local rescue unit in person, I regularly send out sample and sizing sets. One of them is now on a mini mountain rescue road trip and has already been passed on to the fourth unit. Simply because the neighboring teams saw the collection and immediately wanted to test it themselves. There is hardly any better form of marketing – when professionals convince other professionals, that is the strongest recommendation of all.

Organizations that trust ORTOVOX

BOLLAND

PROTECTION

Challenging rescues in the mountains mean varied terrain, highly diverse weather conditions and particular demands on equipment. The ORTOVOX MOUNTAIN RESCUE COLLECTION is uncompromising and tailored to mountain rescues in storms, snow, and rain. Maximum function meets comfort and reliable protection.

FUNCTIONALITY

Simple access options
Large separate safety compartment and circumferential zipper for optimum access to the entire contents of the backpack.

Variably adaptable
Removable quick-gaiter system and adjustable leg width with zipper.

Smart Features
Hook and loop patch for name tag.

Optimal visibility
Bright red and reflective elements all around for 360° visibility in the mountains.

RELIABILITY

COMFORT

Designed to meet the needs of mountain rescuers: The ORTOVOX MOUNTAIN RESCUE COLLECTION features high versatility and exceptional durability. Comfortable, lightweight, and robust workwear that can be flexibly adapted to long rescue missions and any altitude.

DURABILITY

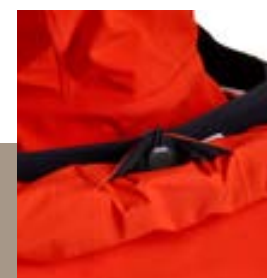

Smart design
Radio microphone fastening.

Practical access options
Separate safety compartment with fastening for a probe, shovel, and light ice axe as well as an integrated daisy chain.

Individually adaptable
Attachable, 2-way adjustable storm hood that can be quickly and easily rolled up and stowed away.

Specific features for mountain rescue
Contrastingly colored lifting loop for hanging the backpack on the helicopter winch.

VERSATILITY

RESCUE MOUNTAIN WEAR

RESCUE 3L JACKET

The mountains and the weather are unforgiving: designed for challenging missions in storm, snow, or rain, the RESCUE 3L line reliably defies the elements. With its **clever material mix**, the RESCUE 3L JACKET provides the exact performance that the relevant body parts require: **robust 3L Shell** material provides protection in very exposed and high-stress areas, while lightweight, stretchy **3L Ortler** material guarantees optimal freedom of movement in less exposed areas. Meanwhile, **3L Shell Light** material on the front is characterized by its exceptional **lightness** and **breathability**. DERMIZAX® NX high-performance membrane used in all three materials is **wind- and waterproof** and extremely breathable. Technical functionality meets **comfort** and an **optimal pack size**.

MATERIAL

- **3L Shell**

+ DERMIZAX® NX: Nonporous PU membrane

+ Wind- and waterproof: min. 20,000mm water column

+ 100% windproof

+ Breathability: up to 28,000 g/m²/24h

+ 2-way stretch material
- **3L Ortler**

+ DERMIZAX® NX: Nonporous PU membrane

+ Wind- and waterproof: min. 20,000mm water column
- + 100% windproof

+ Breathability: up to 32,000 g/m²/24h

+ 4-way stretch material
- **3L Shell Light**

+ DERMIZAX® NX: Nonporous PU membrane

+ Wind- and waterproof: min. 20,000mm water column

+ Lightweight: 82 g/m²

+ High breathability: up to 40,000 g/m²/24h

+ Minimal pack size

+ 2-way stretch material

RESCUE INSULATION JACKET

Engineered for cold days in the mountains, the robust RESCUE INSULATION JACKET combines **breathable, windproof, and water-repellent PERTEX® QUANTUM** fabric with innovative **METAWOOL** insulation—crafted from **80% southern German merino wool**. The lightweight 90 g/m² insulation strikes the **perfect balance between weight and insulation**, delivering reliable thermal performance when temperatures drop. To minimize cold spots, quilted seams have been reduced and shifted to the interior. The premium embossed rescue pattern defines the distinctive design of the insulation jacket.

MATERIAL

- **PERTEX® QUANTUM**

 - + Windproof and water-resistant
 - + High scuff resistance (min. 50,000 abrasion cycles in the Martindale test)
 - + Breathable
- **METAWOOL**

 - + Innovative insulation made from 80% South German merino wool
 - + Moisture-regulating
 - + Ideal weight-to-insulation ratio
 - + Optimized pack size

RESCUE SOFTSHELL PLUS PANTS

Developed for mountain rescue operations in snow, ice and challenging terrain: The RESCUE SOFTSHELL PLUS PANTS combine freedom of movement with comfort and protection in the mountains. The **elastic** softshell fabric with **merino wool** ensures outstanding comfort while **regulating temperature and moisture**. At the same time, it is highly **breathable**, **water-resistant** and **durable** – delivering reliable performance in changing conditions. The thoughtful design with a higher-cut waistband and rescue-specific features is purpose-built to meet the demands of mountain rescue operations, providing optimal support when it matters most.

RESCUE SOFTSHELL JACKET

Total commitment in the mountains, 365 days a year: Thanks to its **versatility** and **smart material mix**, the wind-resistant RESCUE SOFTSHELL line is an adaptable specialist for all elevations, in summer and in winter. While the **scuff-resistant MERINO SHIELD TEC** material with its high elasticity guarantees **optimum freedom of movement** in every situation, **robust inserts** made of **MERINO SHIELD LIGHT** protect against scuffing in exposed areas such as the shoulders, arms and hips. **Merino wool on the skin** provides excellent comfort and has a moisture and temperature regulating effect.

Lightweight and **functional** for maximum performance in the mountains. The 120 COMPETITION LIGHT LINE, with soft, temperature-regulating **merino wool** and a special knitting process, is the perfect all-rounder – for summer and winter. The base layer is produced using a **seamless circular knitting technique** that allows different material thicknesses to cover different parts of the body. The main zones consist of fine 120 g/m² merino, while particularly **breathable mesh structures** are used for the hotspots.

MATERIAL 70% virgin wool (Merino) + 30% polyamide

230 COMPETITION LONG SLEEVE

Our 230 MERINO COMPETITION line is produced using a **seamless circular knitting technique** so that every area of the body is covered by merino wool for when the weather gets cold and the going gets tough. The material strength in the main zones is a thin **190 g/m²**; breathable mesh structures have been used in spots that get more heated, and in sensitive zones the wool is knitted slightly thicker to achieve a material strength of **240 g/m²**. This ensures **effective temperature regulation** and outstanding comfort, even during high-intensity activities.

FIT

ATHLETIC FIT

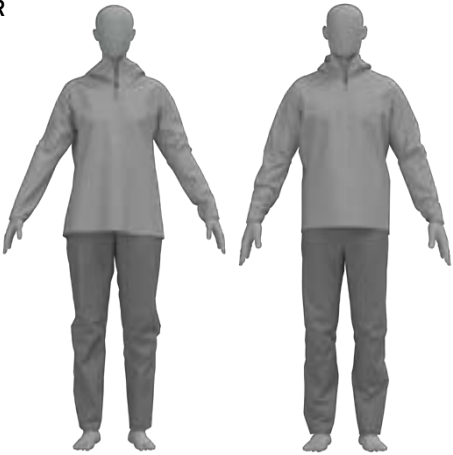

Our closest fit. Products with an athletic fit are suitable as a foundation for all mountain sports. The close-fitting cut adapts to the contours of the body and moves flexibly with it.

Typical products:
Base, first and mid-layers

Layering:
Suitable as a base layer under fleece, insulation, soft or hard shells.

REGULAR FIT

Our classic fit: Versatile, comfortable, and suitable for a wide variety of mountain sports. Whether you're climbing, biking, or mountaineering, or on ski and high-alpine tours – the regular fit offers enough room for layers underneath without looking bulky or restricting your freedom of movement.

Typical products:
Mid-layers, insulation, soft and hard shells

Layering:
Can be worn as a mid-layer or insulation under other layers and as a soft or hard shell on top.

BACKPACKS & SAFETY

Rescues in alpine terrain require optimum flexibility and reliability. The answer: The RESCUE OPERATOR 40+5, a versatile companion with features tailored to mountain rescues and optimized weight. A handy **roll top** allows the backpack volume to be expanded by up to 5 liters or – if the inside is relatively empty – effectively reduced by the four side compression straps, while the **fully opening main compartment** allows quick access to the entire contents of the backpack. In addition, the lid, hip fins and back reinforcement can be removed to save weight. The **lightweight and stable back system** distributes

the load evenly between the hip belt and shoulder straps – for optimum **comfort** even with rescue equipment. The numerous features of the RESCUE OPERATOR are systematically geared towards professional use in the mountains. The **contrasting-colored lifting loop for hanging the backpack**, the **radio holder** on the shoulder strap, the **robust and scuff-resistant Cordura outer material** and the reflective design elements make the RESCUE OPERATOR 40+5 a highly functional backpack for all mountain rescuers.

MATERIAL Polyamide 420 D Cordura: 100% polyamide Polyamide 420 D Ripstop Reflect

Reliable companion for rescue missions: The **RESCUE AVABAG LITRIC 40 electronic** avalanche airbag backpack offers all mountain rescuers optimum **protection** in the event of increased avalanche danger. Produced in Bavaria, South Germany, the **electronic LiTRIC™ system** is extremely **lightweight**, **intuitive** to operate and can also be **activated multiple times**. The set consists of a BASE with regular back length and an integrated LiTRIC™ system as well as a matching zip-on bag with a volume of 40l. The features of the RESCUE AVABAG LITRIC 40 are perfectly adapted to professional use: An all-round zipper ensures quick and clear access to the main compartment, while a large, separate

safety compartment offers space for a probe, shovel and a light ice axe. The two side daisy chains keep important equipment close at hand, and you can also quickly and easily stow your ice axe, helmet and rope on the outside of the backpack. To keep sharp-edged rocks from harming this versatile, lightweight backpack, the RESCUE AVABAG LITRIC 40 is made of **robust**, **scuff-resistant** and **water-resistant** 420D Cordura. **Reflective design elements** on the outer material provide greater visibility in any situation in the mountains. A reliable companion for challenging missions in the mountains to protect those who protect us.

FOCUS VOICE & PRO

**BUILT ON 45 YEARS OF
PIONEERING SAFETY**

45 years of experience, countless innovations, always one goal in mind: making mountain sports safer. With the new **FOCUS PRO** and **FOCUS VOICE**, we're continuing our legacy of success.

FOCUS VOICE

Uncompromisingly simple yet powerful, with voice navigation and 80m search strip width, the FOCUS VOICE redefines avalanche safety for beginners as well as backcountry pros.

MAXIMUM SUPPORT

» WHEN EVERYTHING
TURNS SILENT, YOUR GEAR
SHOULDN'T. «

The **patented voice navigation** provides clear instructions during every phase of the search, helping to keep you calm and focused, reducing stress and search time. The display remains stable from first signal reception. The largest **MIP display** currently on the market shows you all information in top quality, ensuring optimal readability.

MAXIMUM PROTECTION

» WHEN YOU RELY ON
OTHERS, TRUST TO BE
FOUND FASTER. «

The patented **Smart-Antenna technology** detects the device's position in the avalanche and automatically switches to the best transmitting antenna. The result: up to double the range and a higher probability of being found on the first search pass. Thanks to Interference Protection, the FOCUS VOICE automatically adjusts to electronic interference sources in both search and transmit modes, ensuring stable signal transmission.

MAXIMUM PERFORMANCE

» WHEN EVERY METER
COUNTS, REACH FURTHER. «

With an **80m* search strip width**, the FOCUS VOICE is one of the most powerful avalanche transceivers on the market. When searching for ORTOVOX avalanche beacons with Smart-Antenna technology, the search strip width even extends to 90m. The greater the range, the shorter the search path on the avalanche field, which helps detecting the buried victim's signal faster.

*according to ICAR method (AVA REC 0007)

FOCUS PRO

Purpose-built for the most demanding situations and protection for pros, the new FOCUS PRO combines maximum performance, innovative professional features, and patented safety technologies.

FIND FASTER

- **Range:** 80m or 90m search strip width.
- **Permanent Overview and Scrolling Function for Multiple Burials:**
Continuous display of current distance to the four nearest transmitters – targeted transmitter selection through scrolling function.
- **Manual Range Reduction:**
Adjustment of search strip width to 20m or 3m allowing you to focus on nearby signals and minimize interference.
- **Analog Audio Output:**
Pure analog mode with unfiltered raw signals for complex scenarios. The hybrid mode with digital display and analog audio output for acoustic detection of interference sources and signal overlaps.
- **Stable Display from First Reception**
- **Voice Navigation (patented):**
Reduced number of selected, clear announcements – optimized for professionals.
- **Interference Protection**

BE FOUND FASTER

- **Smart-Antenna Technology (patented)**
- **Standby Mode with Secondary Avalanche Switching:**
A protection function for rescuers not actively searching. In standby mode, the device's own transmit signal is temporarily suppressed to avoid interfering with the search. If no movement is detected, the FOCUS PRO automatically switches to transmit mode after two minutes.
- **Search Mode with Secondary Avalanche Switching:**
A protection function for rescuers actively searching. If no movement is detected during search, the FOCUS PRO automatically switches to transmit mode after two minutes
- **Interference Protection**

SCAN FOR
PRODUCT
TECH SHEET

»The FOCUS PRO genuinely impressed me with its range. Combined with precise search functions, an analog mode, and further professional features, it's exactly what we need in the field – an avalanche transceiver that provides control and absolute reliability.«

(*) according to ICAR AVA REC 0007

ICAR = International Commission for Alpine Rescue

Great performance in the snow: The SHOVEL PRO RESCUE is an extremely **efficient, compact** avalanche shovel for professional use. With a size of 720 cm², it has the **largest shovel blade** in the range and boasts an impressively large, effective working length. The ergonomic D-Grip fits comfortably in the hand during every use and gives you maximum power in the snow. The oval shovel shaft with a **non-slip rubberized surface** is particularly sturdy and makes operating

the telescopic shaft extremely intuitive. Four recesses in the **sturdy** anodized aluminum shovel blade enable the assembly of a **rescue sled**. With its flat, sharpened shovel blade, the PRO RESCUE is also perfect for snow profiles, rutschblock tests and igloo building. The **90-degree clearing function** is particularly quick and effective: In an emergency, valuable time and energy can be saved when removing snow.

Plug clearing
function

SHOVEL PRO GUIDE

#5000576

Efficient, medium-sized shovel for professional use on long tours.

Weight	630 g
Length	85 / 43 cm
Blade	640 cm ² 28,5×22,5×5 cm

000265 deep black

Features

- + T-grip
- + Slide-in guide for rapid assembly
- + Telescopic shaft
- + Oval shaft
- + 90 degree Easy Plug clearing function
- + Rescue sled function
- + Large shovel blade
- + High sidewalls and stability ribs
- + Hardened, anodized aluminum
- + Sharp, stable cutting edge
- + Certification: UIAA 156 Standard for Avalanche Rescue Shovels

90° Easy-
Plug clearing
function

PROBE STEEL 320+ | AVALANCHE PROBE

Maximum robustness for accurate probing. The PROBE STEEL 320+ is our longest steel avalanche probe. Designed for accurate probing and **very deep snow**, it is a **reliable tool** for **professional use**. Additional 40-cm segments extend the probe length as needed. The rigid steel, a 12mm bore diameter, and the voluminous probe tip guarantee **maximum probing accuracy**, even in hard snow. The robust steel cable system ensures **consistently reliable tension**, while replaceable components extend the probe's service life. UIAA certified for maximum reliability.

NEW

new

PROBE STEEL 320+
#5000973

Very robust, sturdy and extendible 320cm professional steel probe with PFA quick-assembly system.

Length	320 / 44 cm
Weight	675 g
Ø	12 mm
Material	Steel

- Features**
- + PFA quick-assembly system
 - + Steel cable tensioning system (replaceable)
 - + Depth marker at 1.5m
 - + Visual guide system
 - + Large probe tip (replaceable)
 - + Certification: UIAA Standard 157 for avalanche rescue probes
 - + Extendible
 - + Lightweight probe cover

new

PROBE CARBON 320+
#5000972

Very lightweight, sturdy and extendible 320cm carbon probe with PFA quick-assembly system.

Length	320 / 44 cm
Weight	340 g
Ø	13 mm
Material	Carbon

- Features**
- + PFA quick-assembly system
 - + Steel cable tensioning system (replaceable)
 - + Depth marker at 1.5m
 - + Visual guide system
 - + Large probe tip (replaceable)
 - + Certification: UIAA Standard 157 for avalanche rescue probes
 - + Extendible
 - + Lightweight probe cover

new

PROBE ALU 320+
#5000970

Lightweight, sturdy and extendible 320cm aluminum probe with PFA quick-assembly system.

Length	320 / 44 cm
Weight	400 g
Ø	12,7 mm
Material	7075 Alu T6

- Features**
- + PFA quick-assembly system
 - + Steel cable tensioning system (replaceable)
 - + Depth marker at 1.5m
 - + Visual guide system
 - + Large probe tip (replaceable)
 - + Certification: UIAA Standard 157 for avalanche rescue probes
 - + Extendible
 - + Lightweight probe cover

new

PROBE ALU 280
#5000969

Lightweight, sturdy 280cm aluminum probe with PFA quick-assembly system.

Length	280 / 44 cm
Weight	350 g
Ø	12,7 mm
Material	7075 Alu T6

- Features**
- + PFA quick-assembly system
 - + Steel cable tensioning system
 - + Depth marker at 1.5m
 - + Visual guide system
 - + Large probe tip
 - + Certification: UIAA Standard 157 for avalanche rescue probes
 - + Lightweight probe cover

Material Aluminium

GLOSSARY SHOVELS

UIAA-STANDARD 156

This voluntary safety standard defines the minimum requirements for avalanche rescue shovels to ensure their functionality and durability in emergency situations. These requirements include a shovel blade area of at least 500 cm², a minimum length of 75 cm, and the successful completion of load tests under realistic field conditions. Shovels that meet this standard carry the UIAA Safety Label.

WORKING LENGTH AND BLADE SIZE

The greater the working length of a shovel, the greater the shovel power, regardless of the strength of the person shoveling. However, as tests have shown, when it comes to the size of the blade, this is not the case. Strong people can work efficiently with larger shovel blades for several minutes without becoming excessively tired. However, for less athletic people, we recommend smaller blades.

6061 ALUMINIUM T6

The best aluminum for our high-end products. It is further hardened (T6) during the production process. The weight to rigidity ratio is perfect. The thin material thickness (1.6mm) enables the blade to easily penetrate hard snow. The blades of our PRO shovels, and most of the shafts of our shovels, are made of this material.

EASY-PLUG CLEARING FUNCTION

Invented by ORTOVOX, this solution is still the most robust clearing function on the market. The blade is pushed onto the shaft at a 90° angle. The shovel handle remains fully usable. Using the clearing function, snow in the rear area of the shovel chain can be efficiently cleared away.

GLOSSARY PROBES

UIAA-STANDARD 157

This voluntary safety standard defines the minimum requirements for avalanche probes. These include a minimum length of 240cm, permanent depth markers and sufficient rigidity. Probes that meet this standard carry the UIAA safety label and offer proven functionality for emergency situations.

PFA QUICK-ASSEMBLY SYSTEM

“Patented Flash Assembly” for reliable assembly that’s quick as a flash. With over 100,000 PFA probes sold, the system has established itself in every area of application in the last ten years. We’ve optimized the finer details for even quicker and more efficient handling: The quick-assembly strap, which is attached to the outside of the probe cover, makes immediate opening and assembly possible in one motion. The PFA system also ensures it locks into place smoothly.

7075 ALUMINIUM T6

Lightweight and rigid – our choice for all aluminum probes. 7075 aluminum T6 is a high-strength aluminum alloy which is also used in airplane construction. It is more rigid and more durable than conventional 6000 aluminum but is still lightweight. We use it for our aluminum probes with a bore diameter between 11mm (ultra-lightweight for quick tours, slightly more flexible) to 13mm (sturdier, ideal for frequent use or deeper snow).

CARBON

Our premium probes are made of carbon. The material is extremely stiff, yet very light. Another advantage is the low thermal conductivity of the material – the probe is more resistant to freezing.

STEEL

Steel is extremely rigid and sturdy. When weight is not a factor, but reliability and probing accuracy play a major role, steel is the first choice! Ideal for users that value reliability and accuracy more than weight.

STEEL CABLE PULL LINE

Our most reliable pull line system. For a little extra weight, you get maximum safety.

ARAMID

The aluminum/carbon probe segments are held together by an accessory cord made of aramid. Aramid fibers provide high rigidity, robustness and stability with limited stretching, making them ideal for a tension system.

FIRST AID ROLL DOC
5000203

Size 15 x 10 x 6 cm (compact)

BIVY DOUBLE
5000176

Size 110 x 230 cm
Pack size 8 x 22 cm
Weight 420 g
000479 shocking orange

- Features**
- + For 2 people
 - + Water and dirt repellent thanks to PU coating
 - + Windproof
 - + Robust material in a signal color
 - + Alpine distress signals printed on the cover
 - + Compressible stowaway bag with rolltop

BIVY PRO
5000177

Size 120 x 235 cm
Pack size 9 x 22 cm
Weight 680 g
000479 shocking orange

- Features**
- + Compact size: suitable for 1 and 2 people
 - + Water and dirt repellent thanks to PU coating
 - + Very robust material in a signal color
 - + Lightweight, compact and windproof
 - + Compressible stowaway bag with rolltop
 - + Multifunctional use thanks to numerous loops:
 - Seated tent with ideal protection thanks to hook and loop opening
 - Improvised descent transport in an emergency
 - Preparation for bivi bag knot with loops
 - Tent function thanks to diverse set up options
 - Sun awning

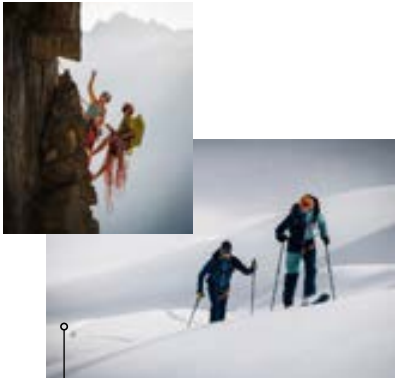

TRAINING & EDUCATION

D I G I T A L U N D A N A L O G

Protecting mountaineers from alpine hazards is at the core of our brand. For us, this goes beyond reliable emergency products. We share our alpine expertise with the mountain sports community to help people better understand risk and make responsible decisions in the mountains. Our ambition is to contribute to a holistic approach to risk management in alpine environments. In addition, our products can also be used in alpine rescue training, for example in practical exercises and for preparing emergency response procedures.

SAFETY ACADEMY LABs
Free, digital training platforms for avalanche safety, alpine climbing and mountaineering.

ALPINE COURSES
Get trained in our alpine courses in the fields of AVALANCHE SAFETY, ALPINE CLIMBING, HIGH ALPINE TOURING or ALPINE FIRST AID. Secure your place!

GUIDE BOOKS
Pocket-sized safety. Use our free SAGB to enhance your expertise, create awareness and make mountain sports safer.

OFFLINE EDUCATION
Exclusive avalanche training presentation for all ORTOVOX PROFESSIONALS - Free Download.

Frank Ammon
The mind behind the Safety Academy

OUR SAFETY ACADEMY. THE MORE YOU KNOW, THE SAFER YOU ARE.

Since our founding, we have been a leader in developing advanced alpine safety gear. With the launch of our SAFETY ACADEMY in 2008, we have once again demonstrated our mountain sports expertise. It is unparalleled in its form, scope, and success. We are a brand, yet we offer one of the largest (and free) alpine training initiatives

in Europe. Thus, we enhance mountain sports safety together with our retailers: with three digital LABs, comprehensive free brochures with a **total circulation of over 2 million**, **35 partner mountain schools** and with **over 4,500 course participants** worldwide every year.

SAFETY ACADEMY MOUNTAIN 3D

The **SAFETY ACADEMY MOUNTAIN 3D (SAM)** is a sophisticated mountain model that closes the gap between **theory** and **practice** in the terrain and thus creates a basic understanding of the **complexity of avalanche development**. With the SAM learning tool, the basics of tour planning with risk management, hazard recognition and avalanche assessment can be learned in a playful way, and practised in a wide variety of tasks.

#5000571

Features
+ 3D mountain model
+ Printed Handbook
+ Avalanche bulletin with interpretation guide
+ Topographical map
+ Clinometer (ruler)
+ 4 dry-wipe markers

Delivery time
+ Immediately available

SAFETY ACADEMY GUIDE BOOKS

Our Safety Academy series currently comprises four guide books. Together with the Verband Deutscher Berg- und Skiführer (German mountain and ski guide association) we have developed the SAGB Rock and Snow. These provide basic knowledge for climbers and mountaineers, as well as basic avalanche knowledge for tourers and freeriders. The new First Aid Guide Book rounds off the series.

SNOW AND AVALANCHE LOG

Professional resources for analyzing the **probability of an avalanche** and the **danger from an avalanche**. Observations and assessments of the avalanche situation can be documented completely and conclusively in a **clear matrix**.

LOG (1 PCS)

#5900613 (DE)
#5900614 (EN)
#5900615 (FR)
#5900616 (IT)

Features
+ Assessment checklists & decision matrices
+ Info on snow crystals, avalanche problems and the avalanche bulletin
+ Help for carrying out a snow profile and snowpack tests

Delivery time
+ Immediately available

LOG BUNDLE (5 PCS)

#5900625 (DE)
#5900626 (EN)
#5900627 (FR)
#5900628 (IT)

FOR
FREE

Training and mastering the use of the emergency equipment is just as important as risk-conscious behavior in the field! The ORTOVOX **TRAINING PARK** is a **permanently installed station** where you can get training on **all types of avalanche scenarios, from simple to complex**. One to five of up to 16 transmitters can be activated from the control center in parallel, according to the random principle. The weatherproof station is independent of the power grid (battery-operated) and sends out the search times for purposes of **analysis**. **Probe hits** on the probing surface of the transmitter are **confirmed by visual and audible signals**.

#5000388

Features

- + Compatible with all avalanche transceiver types (EN 300718)
- + Search for single and multiple burial victims with search time display
- + Up to 16 remote-controlled transmitters
- + Probe hits confirmed on realistic probing surfaces 60 cm x 40 cm
- + Station is intuitive and easily accessible
- + Fixed control center with snow depth adjustment
- + Information board (56 cm x 70 cm) in 1–2 languages; logo placement possible
- + Battery autonomy for an entire winter season
- + Robust, low-maintenance construction
- + Search field space requirements: 100 m x 100 m
- + 3 ORTOVOX beach flags will be provided for marking the field; height: 5m (including snow spike)

Delivery time

- + 3-5 weeks

Here you can find
all ORTOVOX
Training Parks

In the case of an avalanche, you will need to have a functioning avalanche transceiver, a probe and shovel, as well as friends with the same equipment. The **CHECKPOINT** provides a **reliable check** to make sure that the transceiver is working; it also **checks the transmission parameters**. Color LEDs and acoustic signals also indicate functioning in passing. Placed at the **start of a freeride or ski touring route**, the sign also makes people aware of the dangers.

#5001059

Features

- + Precise function check according to avalanche transceiver standard EN 300 718
- + Bright LEDs and loud acoustic signals indicate functioning of the avalanche transceiver
- + Panel (Dimensions: 80 x100 cm) provides information about how it works and increases awareness
- + Distance between skiers and board: 0.5 m to max. 1.5 m (distance between skier min. 5m)
- + Battery autonomy for a complete winter season (3 alkaline D)
- + Operation temperature: down to -25°C
- + Option 1: with board
- + Option 2: with board and stable mounting frame including ground sockets
- + Sponsor logo placement option

Delivery time

- + Control unit: immediately available / Option 1 & 2: 1-3 weeks

Go to ortovox.com for an overview of the **ORTOVOX Training Parks** and **Checkpoints** installed in the Alpine region.

Option 1

Option 2

STS MOBILE

#5001067

Mobile training station for transceiver and probe search. The system is delivered in an ergonomic ORTOVOX PEAK 35 backpack and is immediately ready to use.

Features

- + Compatible with all avalanche transceiver types (EN 300718)
- + Mobile control unit with 4 transmitters
- + Automatic avalanche probe hit signaling
- + Pliant probing surface for realistic probing
- + Each transmitter can be dugged in and controlled individually
- + Robust backpack for easy transport

Power supply

- + Control unit: 1 pc. 9 V Alkaline battery
- + Transmitter: 4 pc. 1.5 V AA Alkaline battery
- + Battery capacity for about 150 hours

Delivery time

- + Immediately available

PRODUCT - SERVICE

PRODUCT CUSTOMIZATION LOGO APPLICATION

Our MOUNTAIN RESCUE COLLECTION has place-holders on the individual products where you can apply your organization's logos and lettering.

Various options (such as transfer printing or embroidery), placements and sizes can be selected depending on the product and material:

- + Organization logo on the left chest up to 6 cm in diameter.
- + Rectangular logo on the right sleeve/shoulder, up to 8 cm x 5 cm, or round logo up to 5 cm in diameter.
- + Text on the back (including reflective text) up to 28 cm x 14 cm.
- + Organization logo on the right side of the pants upper thigh, up to 8 cm, or text up to 10 cm x 2 cm.

To ensure high-quality design, we work together with selected partners who are familiar with our product-specific properties and guarantee reliable processing.

Organizations interested in this service should contact their respective contact person at ORTOVOX to discuss further details.

WARRANTY CLAIM REPAIR

We at ORTOVOX greatly value quality and exclusively use high-quality raw materials for our products. Every product goes through multiple stages of quality control to ensure that we can provide our customers with the highest possible quality.

If despite our high quality standards and careful handling of the product, you experience a material or manufacturing fault, we at ORTOVOX provide a repair and replacement parts service. This service is free of charge within the legal warranty of 2 years (24 months).

For cases outside the warranty (including typical wear and tear, improper use, or damage caused by accidents), this service can be used on request at a charge.

If you have a warranty claim or repair request, please contact your service/local office or organization through which you purchased our product directly. They will contact our sales team who will process your request as soon as possible.

CARE IS EASY

The Ortovox Mountainwear collection stands out thanks to high-quality products conceived especially for mountain sports. With the proper care your new favorite product will give you years of pleasure. You can find the proper care instructions for every product in our collection online.
