

	D	LIKELIHOOD OF TRIGGERING	× C	CONSEQUENCES	= R	RISK
SLOPES IDENTIFIED WITH THE "CRUX FINDER"	≥ 40°	Slopes steeper than 39°		☐ Mechanical injuries? (Obstacles or fall hazard) ☐ Burial depth? (Snow above, terrain configuration?) ☐ Number of People? (Number and competence of rescuers? Rescue effectiveness?)		Extreme terrain is always considered a critical crux.
	≥ 35°	Slope angle 35° - 39°		☐ Mechanical injuries? (Obstacles or fall hazard) ☐ Burial depth? (Snow above, terrain configuration?) ☐ Number of People? (Number and competence of rescuers? Rescue effectiveness?)		With 1 or more check the crux is critical
	≥ 30°	Slope angle 30° - 34°		☐ Mechanical injuries? (Obstacles or fall hazard) ☐ Burial depth? (Snow above, terrain configuration?) ☐ Number of People? (Number and competence of rescuers? Rescue effectiveness?)		With 2 or more checks the crux is critical
	< 30°	Runout zones?
